1. EUPHA update

EUPHA present at Working together for better health and well-being conference

Both our president, Dr Natasha Azzopardi Muscat, and our past president, Prof. Martin McKee, were present at this important conference hosted by the Ministry of Social Affairs and Health of France. The aim of the conference, "Promoting intersectoral and interagency action for health and well-being in the WHO European Region," was to strengthen intersectoral cooperation between the health, education and social sectors in the WHO European Region, for better, more equal health and social outcomes for children and adolescents and their families.

EUPHA at the ECIBC meeting in November in Ispra, Italy

Our new section council chair, Dr Iveta Nagyova, represented EUPHA at the November meeting of the European Commission Initiative on Breast Cancer in Ispra, Italy. The European Commission, in response to the Council of the European Union's conclusions on reducing the burden of cancer, initiated this ground-breaking project to develop a European quality assurance scheme for breast cancer services underpinned by accreditation and referring to high quality, evidence-based guidelines.

Vienna Declaration on health promotion summarized in The Lancet

The Vienna Declaration, initiated by EUPHA and the Austrian public health association, and supported by many of our members and partners, gained momentum. A summary of this Declaration to support the Ottawa Charter was published in The Lancet.

<http://www.thelancet.com/pdfs/journals/l...>

2. European Public Health Conference

9th European Public Health Conference: All for Health, Health for All Austria Centre Vienna, 9 - 12 November 2016

'Everybody will be there'

The EPH Conference aims to contribute to the improvement of public health in Europe by offering a means for exchanging information and a platform for debate to researchers, policy makers, and practitioners in the field of public health and health services research as well as public health training and education in Europe. The European Public Health Conference Foundation, the European Public Health Association (EUPHA) and the [Swedish Association of Social Medicine](#) are pleased to invite you to the 10th European Public Health Conference.

ABSTRACT SUBMISSION WILL OPEN ON 1 FEBRUARY 2017.

Check our [website](#) for more information!!

3. EUPHA members update

Members' meetings at Vienna 2016

During the Vienna 2016 conference, EUPHA offered members the possibility to have short meetings with delegates from their country. This was taken up by Norway, Belgium, France and Israel.

Israel meeting at Vienna 2016

Our Israeli member organised a short meeting with the delegates from Israel during the Vienna 2016 conference. This meeting was attended by 10 delegates, who received information on EUPHA and on the activities of the Israeli Association of Public Health Physicians.

French meeting at Vienna 2016

The French Society for Public health organised a meeting during the Vienna 2016 conference. Around 30 came to the meeting.

SFSP introduced the meeting by explaining the role of national associations in EUPHA, representing SFSP in the governing board but also contributing to news from France for EUPHA's letter, to the editorial board of EJPH, to the scientific committee of the conference and to the search committee for new president. The interaction with EUPHA through SFSP was discussed, including on being more active in organizing specific joint sessions in EUPHA annual meetings. The role of SFSP to help its members was discussed.

4. European Journal of Public Health

The [European Journal of Public Health](#) is a multidisciplinary journal in the field of public health.

The EJPH is published bimonthly. The journal provides a forum for discussion and debate of current international public health issues with a focus on the European region. In 2016, the impact factor of the journal is at 2.751. The 5-year impact factor is 2.512.

The EJPH is the official journal of EUPHA.

6. Interesting news

The Norwegian policy to reduce health inequalities: key challenges

Kjetil A. van der Wel, Espen Dahl, Heidi Bergsli

Nordic Welfare Research, ÅRGANG 1, NR. 1-2016, S. 19–29

Published online: November 2016

The Norwegian strategy for reducing health inequalities from 2007 has been recognised as one of the most ambitious and encompassing in Europe. By proposing action on the social determinants of health, such as income structure, employment opportunities and affordable child-care, the strategy was able to approach the entire social gradient rather than just the socially disadvantaged. In this article, we present the main features of the health equity strategy, and discuss possible obstacles to a successful implementation and a prolonged commitment to reducing health inequalities in Norway. We raise three major concerns: 1) a stubborn fundamental inequality structure, 2) a lack of focus on the gradient in the implementation of cross-sectoral reforms and 3) a possible re-orientation of policy away from redistribution and universalism.

News release: EuroHealthNet urges ministers to seize opportunities for health offered by EU Semester and EU Social Pillar

Press Release | December 6th, 2016

EuroHealthNet has published its review of the public health related elements of the EU Semester. In line with the report it urges national ministers, meeting in the EU Council this week, to think positively about the opportunities of working better together in the context of the EU Semester, considering a more integrated and life course approach to health and for better fiscal sustainability of health care systems.

The EuroHealthNet report "[Will the 2016 EU Semester process contribute to improving health equity ?](#)" analyses the aspects relevant to public health and social equity of the annual economic cycle through its Annual Growth Survey (AGS), National Reform Programmes (NRPs) and Country-Specific

Recommendations (CSRs), with a particular focus on CSRs impacting on child wellbeing and health systems.

Among the main findings and recommendations are:

- The need for fiscally sustainable health care systems and universal access to health and care is recognised among most CSRs relating to health.
- The call for strengthening primary care, disease prevention and health promotion is limited. An integrated approach to health is also lacking.
- The needs of vulnerable children and families should be more extensively addressed.
- A stronger focus and consideration should be given to the impacts of the economic crisis in terms of resources; investing in health promotion and disease prevention should be one of the key measures to support health and care systems' fiscal sustainability.

EuroHealthNet welcomes the exchanges of views scheduled by Ministers in the Employment, Social Policy, Health and Consumer Affairs Council (EPSCO) on 8-9 December. Ministers will consider the development of the EU Semester in health and social dimensions, as well as its core economic measures. They will also debate whether and how a potential EU Pillar of Social Rights should be established, as proposed in the European Commission political priorities 2017.

EuroHealthNet draws its health equity analysis of the EU Semester to the attention of Ministers and urges a positive, practical response to the [questions tabled by the Slovakian Presidency](#), such as:

- Should the EU Semester be debated by health ministers in EPSCO in future?
- How can the AGS be best used to help health systems?

“Through our work within the EU Employment and Social Innovation Programme (EaSI) we have carried out extensive analysis of the reality on the ground in states and communities. There are opportunities for the EU Semester to better resonate with health actors nationally and locally and to make progress on more sustainable public health and social care systems. Our members and partners are keen to contribute with evidence based solutions, in particular on improving health across the life course and reducing health inequalities, which is so urgently needed.” says Caroline Costongs, Managing Director of EuroHealthNet

EuroHealthNet draws particular attention to its recommendations in its [public response to the current consultation on a potential EU Pillar of Social Rights](#), in which it calls for a strong focus on integrated approaches for social factors impacting positively and negatively on health, wellbeing and inequalities, while respecting subsidiarity.

EuroHealthNet also welcomes and recommends that Ministers take into account the important recent Joint Report and Recommendations of the EU Directorate-General for Economic and Financial Affairs and the Economic Policy Committee, on [Health Care and Long-Term Care Systems and Fiscal Sustainability](#), which contains important evidence and guidance for investment in health promotion and public health.

Four steps to precision public health

The use of data to guide interventions that benefit populations more efficiently is a strategy we call precision public health. It requires robust primary surveillance data, rapid application of sophisticated analytics to track the geographical distribution of disease, and the capacity to act on such information. The availability and use of precise data is becoming the norm in wealthy countries. But large swathes of the developing world are not reaping its advantages.

<http://www.nature.com/news/four-steps-to...>

Helping Ex-Inmates Stay Out Of The ER Brings Multiple Benefits

Being in jail is not healthy, but for a lot of people, the best health care they'll receive is what they get behind bars. About 40 percent of inmates are newly diagnosed with a chronic medical condition while incarcerated. Outside, many only interact with doctors when they're in the emergency room. Many former inmates put off getting medical care until they wind up in the emergency room, with conditions that have become a lot worse than they could've been. That means they are also more expensive to treat, costs that are often picked up by hospitals and taxpayers.

UK has 'first sexually transmitted Zika'

The first likely case of sexual transmission of the Zika virus in the UK has been reported by the authorities. The woman has made a full recovery, and it is thought she had been infected by her partner, who had recently visited a Zika-hit country. Mostly spread by mosquitoes, Zika can linger in semen for months.

Drivers Who Miss One To Two Hours Of Sleep Double Their Crash Risk, New Report Finds

Serious sleep-deprivation while behind the wheel has long been known to be deadly, but drivers who get less than the recommended seven hours or more of sleep in a 24-hour period could steadily elevate their risk of a crash as the number of hours of sleep decreases: Drivers who miss between one to two hours of sleep nearly double the likelihood of being in a crash; drivers who miss two to three hours of sleep more than quadruple their risk; and drivers who sleep less than four hours increase their risk 11.5 times.

Pokemon Go: Exercise impact 'short-lived'

A new study suggests that the fitness boost from Pokemon Go was a short-lived phenomenon. Researchers found that keen players walked an average of an extra 955 steps a day in the first week of using the game, but by week six were taking no more steps than they had been before they downloaded the game. Despite the results of their study, researchers still see "huge potential" for augmented reality games to be beneficial to health.

Why Sleep Matters: Quantifying the Economic Costs of Insufficient Sleep

Sleep deprivation is associated with a higher mortality risk and productivity losses at work. Economic modelling of data from five OECD countries found that individuals who sleep fewer than six hours a night on average have a 13 per cent higher mortality risk than people who sleep at least seven hours. At a national level, up to 3 per cent of GDP is lost due to lack of sleep, and an increase in sleep could add billions of dollars to a country's economy.
